

Agent Platform, Crypto Commerce, and the Stripe/Card Rail

Verified Aug 31, 2026 across 13 repos + feature branches. Merge state checked with git, not assumed. backend main=4f22b2ac, production=9fba7ed4.

■ LIVE in production

Capability	Where	Notes
MCP server (22 tools)	swop-mcp	mcp.swopme.co — live in Claude, ChatGPT, MCP Registry. Repo has all design docs + PDFs.
x402 crypto commerce	swop-app-backend	Every seller agent-payable in USDC on adding products. Escrow + shipping + wallet-signed release. NO KYC — works instantly (policy: crypto is never KYC-gated).
Account linking (OAuth)	backend + mobile	QR-approve or email-code. Scoped tools: profile/balances/orders, edit SmartSite, create products.
Delegated sends + pay-x402	backend + mcp	Agents send USDC / pay any x402 link from a user wallet within caps. Confirm-in-app fallback.
Swap quotes (EVM+Solana)	backend + mcp	LiFi + Jupiter. Read-only; execution is a hardened slice not yet built.
Identity API	backend	swop.id → wallet lookup + search. Powers identity tools + agent recipient resolution.
Email (Resend)	backend	All 5 transactional flows; SendGrid retired. Legacy welcome/reset gated off.
Email-an-ID appeal ("local proof")	backend + admin	Manual real-person check (photo ID to support), human-reviewed. Appeals queue in admin console. NOT formal KYC — by design. Live since Aug 9.
Stripe SUBSCRIPTIONS	backend + admin	Live-mode billing, live price IDs, promo codes, Apple/Google guards. Console reads real MRR. (Distinct from the card RAIL below.)

■ BUILT but on branches — NOT deployed (the Stripe / card / KYC lane)

Verified: **zero** Stripe-Connect / merchant-verification / card-checkout code is on backend main or production. It is a large, well-architected effort staged across 5 repos.

Piece	Repo / branch	State
Stripe Connect card rail — destination charges, ledger, refund reversals, USDC/fiat payout	backend wt/connect-card-ledger (5), wt/kyc-x402-20260831 (9)	Not merged
Merchant identity / KYC guard — external IDENTITY_SERVICE_URL + OIDC; X402_MERCHANT_IDENTITY_MODE default DISABLED (crypto stays free)	backend wt/kyc-x402-20260831	Not merged
Merchant onboarding / verification microservice — Stripe CONNECT (not doc-KYC); onboarding sessions, payout routing, fail-closed policy; stores no PII	swop-identity-service (repo)	1 commit Aug 29, Docker-ready, NOT deployed
Public checkout facade + SDK + Cloudflare MCP worker (checkout-js, site-kit, partner model)	swop-commerce-platform (repo)	3 commits, stale Aug 14, NOT deployed
Seller card/payments UI — MerchantPaymentsSettings, gated Connect checkout, verification client	desktop wt/connect-card-ui, wt/kyc-card-ui-20260901	Not merged (card form itself is on main)

■ The core blocker + what's LEFT

The money-moving core does not exist yet. The backend Stripe Connect charge → refund/dispute → USDC-payout ledger is unbuilt, and BOTH new repos explicitly document that they are blocked waiting on it. Nothing card/KYC is deployed.

- **Build:** the backend Stripe Connect charge/refund/payout ledger (the thing both services wait on) + mount the /commerce/v1 facade.
- **Deploy:** swop-identity-service (needs Stripe sandbox keys + OIDC issuer/client provisioning + Product/Legal sign-off) and the commerce-platform Cloudflare worker.
- **Wire:** desktop card/KYC UI to the real endpoints; admin KYC tab to prod.
- **Approvals:** real USDC payout needs Stripe stablecoin private-preview approval; PCI / money-transmission / tax review.
- **Parked by choice:** Stripe embedded-components onramp (staying on Coinbase zero-fee USDC).

Agent-platform items still open (my lane)

- **Perps delegation** — backend on main (4f22b2ac, NOT prod) + mobile toggle OTA'd; needs prod cherry-pick + a live test (funded Hyperliquid account, Privy consent, geo-allowed). \$25 margin cap / 5x leverage ceiling / open+close.
- **EVM swap execution** — hardened slice, quote is live; execution reuses executeGoldmanLifiSwap pattern behind a router allowlist. Not built.
- **Directory listings** — Anthropic (needs a Claude Team org) + OpenAI Apps-SDK submission.
- **Dual-mode product link** — one shareable link that serves a human a checkout page and an agent a 402. Lives in x402Controller = the KYC/x402 agent's lane; hand off or build as a standalone share page.

POLICY (confirmed with Travis, Aug 31): x402 / crypto commerce is NEVER KYC-gated — works the moment a user adds products. KYC applies ONLY to the card / Stripe Connect rail. Keep X402_MERCHANT_IDENTITY_MODE=disabled on the crypto path; enforce identity only in the Stripe onboarding path.

Repos: swop-mcp · swop-app-backend · desktop-app · swop-mobile-expo · swop-admin · polymarket-backend · swop-commerce-platform (new) · swop-identity-service (new) · swop-website · beachhead · + contracts/redeem. Lanes: agent platform (shipped) vs Stripe/card+KYC (other agents, staged). No file collisions — verified.
